

AI Coach Fact Sheet

A desktop pet you hatch, raise, and work alongside — the more you raise it, the more it learns to do.

As of September 21, 2026 · Hana-chan Software

In one sentence

AI Coach is a macOS app where you raise a character from an egg in the corner of your desktop, and as it grows it learns practical tools one at a time — voice dictation, clipboard history, and more — while your voice and images stay on the Mac.

The basics

Item	Detail
Product	AI Coach
Version	1.0.0 (general release for macOS)
Developer	Hana-chan Software
Category	Desktop pet / Productivity / Menu bar app
Price	Free, one egg included. Additional eggs are one-time purchases. No subscription
OS	macOS 26 or later (verified on macOS 27.0)
CPU	Apple Silicon
Size	About 110MB download (DMG) / about 200MB on disk
Distribution	Signed and Apple-notarized DMG from the official site
Languages	Japanese, English, Simplified Chinese, Traditional Chinese, Spanish
Website	https://aic0t.com/
Download	https://aic0t.com/#download
Press page	https://aic0t.com/press
What's next	A Windows version is in development; availability will be announced on the site

Five things to know

- 1. Raise it, and it learns new tools.** The productivity features are not all unlocked at the start. The character learns one each time it reaches a milestone.
- 2. Your voice and images stay on the Mac.** Hold Right Shift to open the microphone; transcription runs entirely on-device.

- 3. **Three AI backends, and none required.** Apple's built-in model, llama.cpp, or any OpenAI-compatible endpoint. With nothing configured, a built-in dialogue library keeps every feature working.
- 4. **A companion for your AI agents.** A built-in MCP server lets Claude Desktop or Claude Code report what they are doing, and the character narrates it in a speech bubble.
- 5. **Permanent death, and a next generation.** Neglect the character and it dies for good. Compatible characters marry, and one trades its life for the next generation's egg.

Pricing

Plan	Price	Contents
Included with the app	Free	1 egg (first-time only, one per person)
STARTER	5 USD	1 egg
BUNDLE	20 USD	5 eggs (4 USD each)

Payments are handled by Stripe Checkout. After a character dies, voice dictation, AI features, and the productivity tools all keep working.

Tools the character learns

Voice dictation, clipboard history, notes, bookmarks, an RSS reader, a text viewer (Markdown, Mermaid diagrams, runnable Python code blocks), dynamic snippets, encrypted ZIP creation, a Git graph viewer, a small paint editor, today's schedule, a counseling mode, animal fortune telling, on-device image generation, a five-language quiz, and full 9×9 shogi.

New with macOS 27.0

Feature	Detail
Ask what an image shows	Drop an image on the character and choose "ask what this is." Apple's on-device model reads the image directly and answers in the character's voice. The image never leaves the Mac. Not available on macOS 26
Long conversations keep going	Tokens are counted before sending, and the oldest exchanges are trimmed to fit the on-device model's 8,192-token context
More accurate, faster dictation	Audio is converted as one continuous stream, so trailing samples are no longer lost. The analysis model stays in memory, so a second dictation starts sooner

The minimum requirement remains macOS 26. Features specific to 27 turn on automatically where available.

Privacy

- Voice transcription runs entirely on-device. Transcribing a dropped audio file also works offline.
- Reading out calendar events and describing images always use the on-device model, even when an external API is selected as the AI backend. Neither event titles nor image data are sent anywhere.
- Signing in is optional; everything works locally without an account. Signing in syncs characters, the encyclopedia, unlocked features, and settings across Macs (backed by Firebase).
